# Electrode / Substrate and Sealing ITO Glass / Bare Glass

We can supply OLED, OPV grade ITO, Indium Tin Oxide, transparent conductive coated glass. The ITO is deposited onto polished soda lime float glass in two standard smooth thicknesses giving 9~15 ohms per square and 4~6 ohms per square. Then SiO2 barrier coating is deposited between the ITO and glass.

Including custom photomask, we can supply the ITO glass cutting, cleaning and patterning service to customer requirements. The specialized pattern masking process is used which allows us to offer quantities ranging from small scale prototyping of research requirements to full scale production volumes.

We also provide cleaning service of bare and sandlasted glass for the use of cover. Smaller pieces of the cover glasses can be cut and based on customers requirements.

UV Curing Adhesives for Sealing Application

UV curing adhesives not only bond materials together but they can also be used to seal and coat products. Also, it adheres well to glass surfaces. This product is cured after exposing to UV radiation. To obtain full cure on surfaces exposed to air, radiating wavelength at 365nm is effective.
