

## DESCRIPTION OF THE SURFACE

### The Front View:

1. **Camera Lens:** Records video of the surrounding area.
2. **Status LED:** Indicates the camera's current status.
3. **WPS Status LED:** Indicates the WPS connection status of the camera. While connecting, the blue LED will flash.
4. **Microphone:** Records audio from the surrounding area.
5. **Infrared LED:** Used to illuminate the camera's field of view at night.
6. **PIR Sensor:** Passive Infrared sensor for motion detection.
7. **ICR Sensor:** The IR-Cut Removable sensor monitors lighting conditions and switches between color and infrared accordingly.

### The Rear View:

1. **Ethernet Port:** This is a standard RJ-45 connector for 10/100 Mbps Ethernet networks.
2. **Power Connector:** A DC 5V inlet that connects to an external power supply.
3. **DI/DO Connector:** I/O connectors for connecting with external devices.
4. **Reset Button:** Press and hold this button for 10 seconds to back to its factory default settings.
5. **WPS Button:** Press this button, then push and hold another WPS button on your router for 5 seconds to set up a wireless connection automatically.
6. **Micro SD Card Slot:** Insert a Micro SD card as it local storage including recorded image and video.
7. **Speaker:** Provides the camera's audio signal output.
8. **Adjustment Ring:** Tighten or loosen the adjustment ring to adjust the camera's position.

## Mount the Cube Camera

1. Place the mounting base and use a pencil to mark the holes. Drill two holes or screws where you marked. Fix the mount base to the ceiling/wall with the screws.
2. Place the mounting base over the screw that is mounted on the wall. Make sure the base is locked. Place the base cover on the base and screw the camera stem clockwise into the mounting base.
3. Adjust the monitoring direction of the camera. Tighten the collar to lock camera in place.

## Hardware Installation-with an Ethernet cable

To create an Ethernet connection:

1. Connect the power cable to the camera's DC power jack. Then connect the power adapter to a power outlet.
2. Connect the Ethernet cable to the Ethernet port located on the rear of the camera. Then connect the other end into your router.
3. Confirm the correct network connection status. After the connection process is complete, the Status LED (②) will turn solid green.

### Note

Refer to the “**Network Configuration**” instructions of the **User Manual**, which is on the included CD-ROM to connect your IP camera to a computer or a network with a RJ-45 cable configuration for connections.

## Hardware Installation-with the WPS Push Button

To create a WPS connection:

1. Power on your camera.
2. Press and hold the WPS button for about 5~6 seconds. The WPS status LED will flash blue (③).
3. Press the WPS button on your router within 60 seconds. The camera will automatically create a wireless connection to your router. While connecting, the blue WPS status LED (③) will flash. After the connection process is complete, the Status LED (②) will turn solid green.
4. Confirm the correct network connection status. For additional information please refer to the “Frequently asked questions” website at <http://www.aprotech.com/faq.php>

### Note

- (1) If you are not sure where the WPS button is on your router, please refer to your router's User Manual. If your router does not support WPS, you have to use the wired connection method as described above.
- (2) Please make sure that your router supports **WPS** (Wi-Fi Protected Setup) /**QSS** (Quick Security Setup), then you can use the WPS button on the camera to easily create a secure wireless connection to your network.

On some routers, you may need to log in to the web interface and click on an on-screen button to activate the WPS feature.

## Install the Camera App- AppPro

Please search for the AppPro app on the App Store or Google Play and download it to you mobile device. If you have a QR-code scanning app, you can scan the corresponding code below to go straight to the app page.

## Add the Camera

Two methods to add a new camera.

1. Scan QR code on the camera.
2. Manually in the camera's DeviceID and Password (default: 9999).

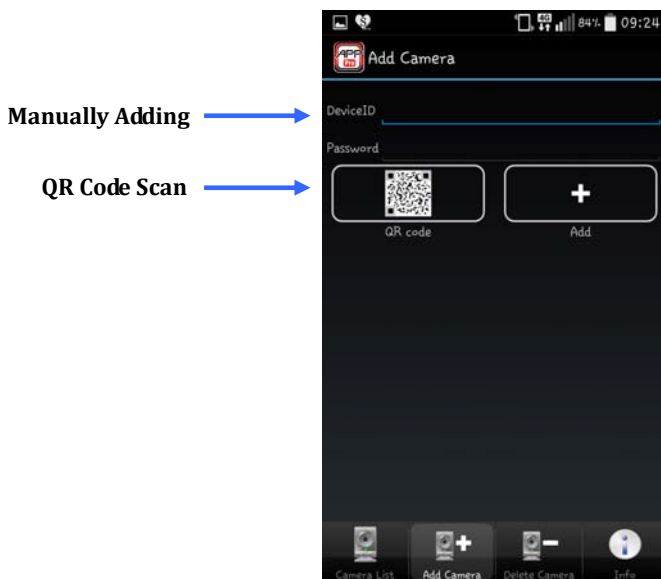

## Add the Camera-- QR Code Scan

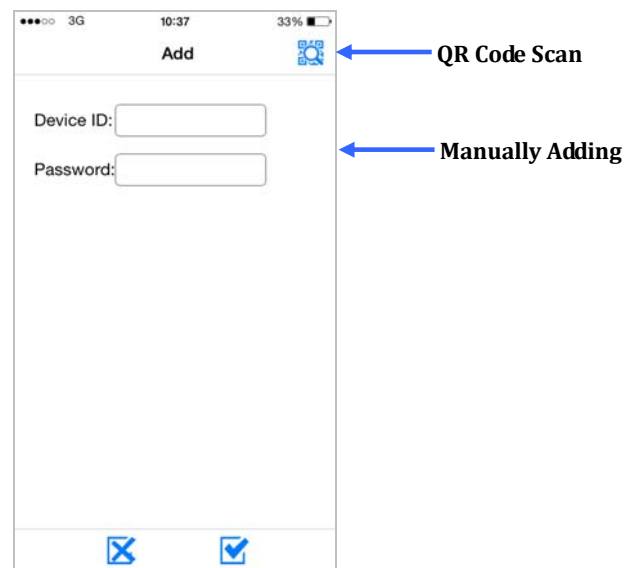

1. Scan QR code of the camera: You can just scan the QR code to add a camera.
2. Select "+" (Add) on the screen to add the new camera.

### Note

- (1) To add camera by scanning QR code on the camera, please make sure that your camera has been reset to the factory settings.
- (2) QR-code scan might not supported by some mobile device. Please visit your phone's application store (the Google Play or App Store) and download a QR code reader/scanner app first.
